SID SAYS.....

S*T*O*V*E F*I*R*E*S BE CAREFUL!

Because of the recent spate of stove fires it is opportune to point out some safety factors which could prevent this happening to you and the procedure to be followed in the event of a stove fire.

REMEMBER:

The majority of stove fires are caused by human error - take care that elements are switched off after use or the correct element is switched on.

Adjust your stove or hotplate to the right temperature and be aware at all times of what you have left cooking.

Don't leave any fat or oil on the hotplate if you are not cooking and don't store fat or oil in the oven.

PROCEDURE IN CASE OF FIRE:

Top of Stove - Burning Fat or Oil

1. Switch off power at stove or switchboard.
2. Push burning article to one side of hotplate - do not attempt to remove burning article from stove.
3. Cover article with metal tray or larger pan, wet towelling or wet newspaper, being careful not to splash water on to fat.
4. Do not use water to extinguish fat or oil fires.
5. If it is out of your control ring a fire alarm or report it to the Post Office Exchange. The Emergency number is 199.

Oven Fire

1. Switch off power at stove or switchboard.
2. Close oven door.
3. Cover stove air vents with wet towelling or wet paper.
4. Allow oven to cool before opening.
5. If out of control act as for (5) above.
